Subject: Request for approving updated PhD objectives for Abhishek Hupele-reg.

Dear IPAC Members

Thanks a lot for your constructive discussion and suggestion given during IPAC presentation of Mr.Abhishek Hupele, our part-time PhD student, on 17th March 2026, during 3.45-4.45 PM.

Following your valuable inputs we have refined the objectives and same are listed below:

Objectives for IPAC report:

1. Design, implement, and evaluate a feature-level game-theoretic machine unlearning mechanism

2. Systematically analyze the robustness of the game-theoretic unlearning mechanism under different attack models
3. Develop adaptive game-theoretic strategies for machine unlearning in evolving data ecosystems

Actual Intended Objectives:

1. Design, implement, and evaluate a feature-level game-theoretic machine unlearning mechanism that balances unlearning effectiveness, model utility, and computational cost.
2. Systematically analyze the robustness of the game-theoretic unlearning mechanism under different attack models, including strategic, adversarial, and information-asymmetry-based attacks.
3. Develop adaptive game-theoretic strategies for machine unlearning in evolving data ecosystems, where data distributions, provider incentives, and unlearning requests change over time.

I request you to approve the above mentioned objectives. Student is still working on the IPAC reports addressing other comments, the updated and corrected IPAC report will be submitted to R&C office.

with regards
